

## GT5 Series/ GT10 Series

### Battery Life Performance

#### Battery Life Expectations:

GT5BK/GT10BK series are designed for efficient energy use. Battery lifespan varies depending on whether you are operating the smart lock using the included Wi-Fi module, which is optional.

**The included WiFi Module is shown below.**

Lock will have access to smart features such as the Smart Solity App. When the included WiFi module is connected, it engages in periodic communications with the network. This increases activity, resulting in the battery life expectancy averaging about 6 months.

**Without the included WiFi Module Installed,** the wireless communication is eliminated. Resulting in the battery expectancy to last an average of two years with normal usage.

#### Battery Replacement:

No specific battery chemical type required. Suggested battery replacement is standard Duracell AA batteries. Please check with local laws for proper battery disposal.
